

RENTAL PIPELINE RECOMPRESSION UNIT

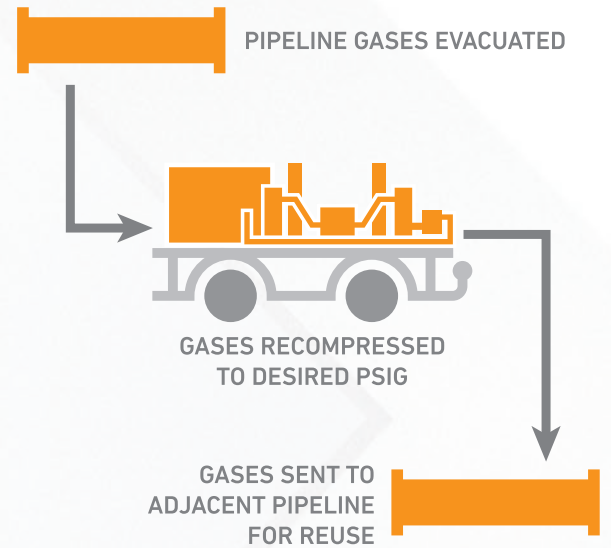

RECOVER PRODUCT, REDUCE FLARING, INCREASE SAVINGS

22151 East 91st Street | Broken Arrow, OK 74014 USA | +1.918.258.8551 | zeeco.com

As a world leader in advanced combustion and environmental solution systems, Zeeco is continuously taking steps to help customers increase efficiencies and savings while reducing or eliminating methane emissions. Zeeco offers mobile rental compression services that allow gases to be evacuated from a pressurized system and recompressed for relocation to an adjacent pipeline or other pressurized systems for reuse.

HOW IT WORKS

ZEECO® recompression units connect to your pressurized systems, whether it is a small section of pipe, large transmission pipelines, or pressure vessels. Pressurized gasses are piped to Zeeco's recompression unit and can be sent to an adjacent pipeline at a designated discharge pressure for reuse. The source pressure can be 1000 psig or greater and reduced as low as five psig. Any gas that remains in your pressurized system following this process can be destroyed with a ZEECO portable combustion device to further minimize emissions and your carbon footprint.

RECOMPRESSION BENEFITS

- Zero routine flaring
- Methane mitigation
- Minimize emissions
- Cost savings
- Recover product
- Decompression of system with low noise and no visible flame
- Meet or exceed environmental and safety regulations

PAIR RECOMPRESSION UNITS WITH A ZEECO COMBUSTION SYSTEM

Partnering with Zeeco for rental compression equipment means you also have access to our full line of rental combustion equipment, allowing you to destroy any residual waste gas, in many cases resulting in a 99.99% reduction in methane emissions when compared to venting alone.
